I. Background

In September 2005, the 46th Directing Council of the Pan American Health Organization (PAHO) adopted Resolution CD46.R13 which highlighted, among other things, the need to establish policies and operational plans to achieve a reduction of the malaria burden by at least 50% by 2010 and 75% by 2015; and to designate a Malaria Control Day in the Americas on a selected annual date, to recognize past and current efforts to prevent and control malaria, promote awareness, and monitor progress. Similarly, in May 2007, the 60th World Health Assembly passed resolution WHA60.18: “Malaria, including a proposal for establishment of World Malaria Day” which provides, among other things, that: “World Malaria Day shall be commemorated annually on 25 April or on such other day or days as individual members may decide …” Guyana, which has been commemorating a National Malaria Day since 2003, proposed the date for the Americas to be 6 November, which coincides with the day when the presence of malaria parasites in the blood of patients with febrile symptoms was first observed by Charles Louis Alphonse Lavéran in 1880. With these precedents, the 27th Pan American Sanitary Conference held in Washington DC from 1–5 October 2007 resolved that November 6 will henceforth be observed annually as Malaria Day in the Americas. (Full text of CSP27.R11 is available through http://www.paho.org/english/gov/csp/csp27.r11-e.pdf)

Currently in its fourth year of commemoration, Malaria Day in the Americas is regarded as an important opportunity and mechanism for countries of the Region to engage various stakeholders in aggressively fighting malaria. In June 2008, the PAHO Executive Committee emphasized the need to build upon the momentum of Malaria Day in the Americas and for peoples of the Region to become strong and involved advocates against the disease.

II. Malaria Day in the Americas: Concept and Objectives

The Regional Strategic Plan for Malaria in the Americas 2006–2010 highlights communications and advocacy as among the key issues in malaria that needed increased emphasis in the Region. As PAHO implements the strategic plan, the Media Communications, Publications and Advocacy Plan for Malaria in the Americas was developed and consolidated in May 2006. An important element of the plan is the commemoration of Malaria Day in the countries of the Americas which campaigns for increased advocacy and
commitment among stakeholders and draws communities and the general population into concrete actions that contribute to the achievement of goals and targets in all levels – global, regional, country, and community.

_Malaria Day in the Americas_ which will be observed for the fourth time on _6 November 2010_ is envisioned to be the platform upon which countries of the Region can engage in a year-round aggressive campaign against the disease. Specifically, _Malaria Day in the Americas_ seeks to attain the following objectives:

- Improve the communication process and extension of advocacy work to all stakeholders and target audiences.
- Enhance visibility/interest on Malaria in the Region of Americas and the global scourge that the disease brings to peoples of the world.
- Increase awareness and understanding of the key issues among target audience/population.
- Catalyze change of attitudes and modification of behaviors.
- Generate advocacy/support from the public, policy makers, clients and strategic partners.
- Encourage increased and enduring support to efforts against malaria, including the elimination of local transmission in areas where such is feasible.

Partners and malaria stakeholders in the Region are encouraged to consider this concept and objectives in the commemoration of _Malaria Day in the Americas 2010._

---

**Theme for Malaria Day in the Americas 2010**

**Counting Malaria Out – Promoting Best Practices and Collaboration**

(Adapted from World Malaria Day 2010 Theme)

On the occasion of World Malaria Day 2010, Roll Back Malaria (RBM) Partners have agreed to use the following key messages in the joint effort to keep malaria high on the international development agenda. Under the same 2009 theme of "Counting malaria out", the Partnership continues the two-year campaign to intensify global efforts to:

- Implement the Global Malaria Action Plan (GMAP)
- Reach the first important malaria milestone by 2010
- Strengthen health systems in endemic countries for the long-term goals of sustained control and disease elimination.

In addition, the Region of the Americas continues to pursue its commitment to global targets beyond 2010, including the UN Millenium Development Goals (MDGs), towards the long term objective of stopping local malaria transmission in areas where such is deemed possible. Malaria is among the diseases identified as feasible to be eliminated in a number of countries in the Region by the Pan American Health Organization in “CD49/9: Elimination of Neglected Diseases and other Poverty-Related Infections” (Full text of CD49/9 is available through: [http://new.paho.org/hq/index.php?option=com_content&task=view&id=1640&Itemid=1425&lang=en](http://new.paho.org/hq/index.php?option=com_content&task=view&id=1640&Itemid=1425&lang=en))
Key Messages for 2010
(Adapted from World Malaria Day Messages consolidated by the Roll Back Malaria Partnership)

1. Investment in malaria control is saving lives and has far-reaching benefits.
2. Malaria Control is rapidly advancing throughout Africa due to intensified efforts.
   (In the Americas, malaria cases have decreased by 56% between 2000 and 2009. Eighteen of the 21 endemic countries in the Americas reported significant reduction in cases while 3 countries indicated increase in malaria cases.)
3. Malaria control, research and elimination activities significantly impact the MDGs.
4. 2010 is a year of opportunity and of renewing global commitment to malaria’s demise.

III. Key Figures
(Coverage and cost estimates are based on the Global Malaria Action Plan, 2008)

To achieve universal coverage by 2010, the GMAP requires the following interventions:
- More than 700 million insecticide-treated bed nets – half of those in Africa
- More than 200 million of doses of effective treatment
- Indoor spraying for around 200 million homes annually
- Approximately 1.5 billion diagnostic tests annually

To reach universal coverage with appropriate interventions by 2010 in the Americas:
- 17 million LLINs need to be in place in 2010;
- 5 million of households need to be sprayed with insecticides;
- 40 million parasitological diagnostics are needed to confirm suspected malaria fever cases; and
- 2.7 million first-line treatments with chloroquine / primaquine and ACTs are needed.

By 2010, through targeting universal coverage:
- Global malaria cases are reduced by 50% of the 2000 levels: 175-250 million cases annually and less than 500,000 deaths annually from malaria.
- Global malaria deaths are reduced by 50% from 2000 levels.

In the Americas, achievement of the target for 2010 and the malaria-specific UN MDG for 2015 means:
- Decreasing annual malaria cases from approximately 1.15 million in the year 2000 to 575,000 by 2010 (50% reduction) and to 287,000 by 2015 (additional 25% reduction)
- Reducing malaria deaths from 348 in the year 2000 to less than 174 (50% reduction) and to less than 87 (additional 25% reduction)

Globally and in the Americas,
- Effective, long-term malaria control is inextricably linked to the strength of health systems. Strong health systems can deliver effective safe, high-quality interventions when and where they are needed and assure access to reliable health information and effective disease surveillance. At the same time, integrating malaria treatment, prevention and surveillance into existing health programs and activities in endemic countries will ensure that funding earmarked for malaria control contributes to the development, expansion and continuous improvement of national health systems.
The international community has recognized the importance of health systems strengthening in combating the major poverty-related diseases in the poorest countries of the world.

Success stories in the Americas (between 2000 and 2009), resulting from the implementation of best practices and collaboration include:

- 56% reduction of malaria cases in the region
- Approximately 77% reduction in malaria mortality
- 7 countries with >75% reduction in annual malaria cases which indicates achievement of malaria UN MDG for 2015
- 5 countries with 50% to <75% reduction in annual malaria cases which indicates achievement of RBM targets for 2010
- 6 countries with <50% decrease in annual malaria cases indicating stronger malaria control status
- At least 4 countries are currently on pre-elimination status and an additional 5 other countries are working towards malaria elimination

(Source: Malaria Country Reports, 2009)

Investment needed worldwide to achieve these global goals:

- $5.3 billion USD in 2009
- $6.2 billion USD in 2010
- $5 billion USD annually from 2011 to 2020 to sustain progress
- $1 billion USD annually for research and development of new prevention and treatment tools

In the Americas, the investment needed for malaria control and elimination are:

- $227 million USD in 2009
- $261 million USD in 2010
- $219 to 226 million USD annually from 2011 to 2020 to sustain progress
- $120 million USD annually by 2025 if current trends are sustained

IV. Regional and National Events for Malaria Day in the Americas: Examples from 2007 to 2009

In 2007, 2008, and 2009, simultaneous activities were held in various countries such as Belize, Bolivia, Colombia, Ecuador, El Salvador, Guatemala, Guyana, Honduras, Mexico, Nicaragua, Paraguay, Peru and Venezuela which include various exhibits, contests, health promotion activities, discussion forums, recognition ceremonies, and intensive multi-media campaign.

During the past three years, important events were held in Washington DC to commemorate Malaria Day in the Americas. These include:

- (2007) Scientific session entitled “Combating Malaria: What Works?” held during the American Public Health Association Annual Conference where the experience of the Region on malaria in the Amazon was featured and discussed.
- (2008) PAHO coordinated the “Malaria in the Americas Forum: Overcoming the Challenges of a Borderless Disease”, participated in by representatives from various global, regional, and national stakeholders in malaria, focusing on key issues that
include climate change and malaria; borders and health diplomacy; and lessons learned and future needs. During the malaria day activities in 2008, PAHO launched the search for the Malaria Champions of the Americas, to identify, celebrate, and provide avenues to emulate best practices and success stories in malaria prevention and control.

- (2009) The awarding ceremony for the Malaria Champions of the Americas is a key event in the commemoration of the 2009 Malaria Day in the Americas at the PAHO headquarters in Washington DC, held alongside the “Malaria in the Americas Forum: Counting Malaria Out towards the 2010 Targets and the UN Millennium Development Goals”. Featured topics in the forum include updates on the status of malaria in the Region; malaria and mobile populations; and lessons learnt during the eradication era and their possible application to malaria elimination in the Americas. Since November 6th falls on a Saturday this year, the Regional event in Washington DC will be held on November 4th, 2010 (Thursday). The top finalists for the 2010 Malaria Champions of the Americas Award will be honored in a ceremony that celebrates people and organizations who contributed most this year to containing this disease that annually afflicts more than half a million people in the region and places the health of millions more at risk. The 2010 Malaria in the Americas Forum will also feature the work of the Amazon Malaria Initiative / Amazon Network for the Surveillance of Anti-malarial Drug Resistance (AMI/RAVREDA).

Partners and stakeholders in the countries and communities are enjoined to hold similar events/efforts on Nov. 6, 2010 or any time during the year. It is emphasized that while the commemoration is set annually on the 6th of November, advocacy efforts will be carried out throughout the year.

The Region envisions having stronger and more consolidated set of events for the annual commemoration in 2010. It is hoped that partners and stakeholders in all levels of work will also have increased and stronger participation in planning and commemorating Malaria Day in the Americas in the coming years. While a region-wide theme and activities are advocated, countries are encouraged to use the annual commemoration as platform to share a message and engage in activities that directly address national realities and specificities. Partners are enjoined to inform the PAHO Regional Malaria Program of specific activities scheduled in the countries for the 2010 Malaria Day in the Americas so that the information can be disseminated accordingly.

Specific country activities and events for Malaria Day in the Americas 2010 will be announced to the public in advance.
